JULY/2019

ENVIRONMENTAL - SOLID WASTE: MANAGEMENT SYSTEM

On June 25, 2019, the Ministry of Environment published Ordinance No. 412 ("Ordinance") implementing the National System of Solid Waste Management Information ("SINIR").

SINIR is an instrument of the National Solid Waste Policy ("PNRS"), that aims to disclose a diagnosis of the solid waste management in Brazil, through a system.

The Ordinance establishes that each year the States, the Federal District and the Municipalities are obliged to update the SINIR with data related to solid waste management.

The SINIR allows monitoring, inspection, evaluation of the efficiency of solid waste management, including take-back systems, as well as evaluation of results, impacts and follow-up of the goals established in solid waste management plans.

Veirano's environmental team has expertise on the subject and is available to provide further clarification.
