ENVIRONMENTAL – TAKE BACK: COVID-19 AND GOALS FROM CETESB

On April 8, 2020, the Environmental Protection Agency of São Paulo – CETESB - published Decision No. 035/2020 from the Board of Officers ("DD"), regulating fulfillment of quantitative goals of take back systems from CETESB, considering the COVID-19 state of emergency and the suspension of selective waste collection in several municipalities.

The DD sets forth that during the state of emergency the fulfillment of quantitative goals of take back systems that act through the structuring and support to cooperatives will not be required, provided that:

- The take back systems continue to invest in the cooperatives during this period, at least in the same average amount of the last 6 months;
- The remuneration must be direct to the associates of the cooperative or must be in a format that complements social assistance measures from municipal, state or federal government to such social group.

The investment must be proved by filing with CETESB the financial reports together with the 2020 Annual Report Results.

Veirano's environmental team is highly experienced on the subject and is available to provide further clarification.
